1.0 INTRODUCTION

1.1 Purpose

This document defines the systematic approach for the disposal of Appliance servers with Customised OS.

1.2 Scope

The scope of this document covers the disposal of all Wintel/Unix servers falling in the category of Appliance Servers. Any requests raised to dispose any appliance servers will be handled as part of Single Environment Workflow change requests and its associated CTASKS, in the organization's Service-Now (ITSM tool) as per the Change Management SOP (SOP-000474706).

1.2.1 Out of scope

The Change must be created by the respective support team or CI owner for the Appliance server retirement.

1.3 Assumptions

N/A

2.0 DEFINITIONS & ACRONYMS

The definitions and acronyms defined in the ITQMS Glossary Standard (SOP-000477729) are the standard definitions to be used.

Table 1 Definitions & Acronyms

Abbreviations, Acronyms and Terms	Definition
CI	Configuration ITEM
DAF	Disposal Authorization Form
Service-Now (ITSM tool)	IT Service Management
RIM	Records Information Management
SEP	SEP Symantec Endpoint Protection

3.0 ROLES & RESPONSIBILITIES

Table 2 Roles & Responsibilities

Role	Description
System Owner :	Member of IT organisation responsible for Signing off on the DAF and/or Memo Document
Business Owner (Based on the application)	Member of the Business organisation responsible for signing off on the Memo document
Change Owner : Support team from Appliance are responsible for raising the change.	Responsible for requesting and planning the change, completing the appropriate documentation, recommending the release schedule, and managing the change into production.
Technical Approver :	Responsible for reviewing and approving the changes for accuracy and completeness.
CSV Approver (CSV):	Reviews and approves all changes to ensure that documentation is complete and provided in change. Provides final review of the change as implemented and tested for non-GxP systems
Global Quality Assurance (QA) :	Reviews and approves all change requests with GxP sensitivity to ensure documentation is complete and change request is implemented and tested as documented.

4.0 DISPOSAL PLAN

Server disposal Change CTASKS:

Table 3 CTASKs & Description

S.No	CTASKs	Description	Action Owner
1	Server Information	This will involve capturing the configuration details of the server (If Applicable)	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements
2	Final Full image Backup	This will involve taking a Full image backup with the retention period of 12 Months	Global-IT-INF-Backup
3	Application Disposal	This will involve capturing the Application Disposal evidence	CI or change owner and application support Team
4	Remove Backup Policies	This activity will ensure that all backup policies applied onto the server CI(s) are being removed prior to disposal.	Global-IT-INF-Backup
5	Remove the servers from Monitoring,	This activity will ensure that the servers CI(s) are removed from all monitoring tool consoles.	Global-IT-INF-Monitoring Tools
6	Remove from TEM	This activity will ensure that server CI(s) are removed from TEM Tool (If Applicable)	Global-IT-INF-Monitoring Tools
8	Remove OS Subscription	This activity will ensure that server CI(s) are removed from the subscription portal (If Applicable)	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements
9	Remove the server from NAS share export list	This activity will ensure that server CI(s) are removed from the NAS export list (If Applicable)	Global-IT-INF-Storage
10	Storage Reclamation & Reclaim the physical port	This activity will ensure reclaiming of storage space provisioned to the server and reclaiming of SAN FC ports (If Applicable)	Global-IT-INF-Storage.

S.No	CTASKs	Description	Action Owner
	(for physical servers)		
12	Disjoin the Server from MYL.com Domain	This activity will ensure that server CI(s) dns entries are removed from the Appliance server (If Applicable)	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements
13	Shutdown the server	This activity is performed to ensure that the server is powered off	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements
14	Remove the host records from AD	This activity is performed to ensure that the server CI(s) and physical IMM CI(s) is removed from the AD dns records	Global-IT-INF-AD
15	IP reclamation and Network ports (for physical servers)	This activity is performed to ensure that the server CI(s) and physical IMM CI(s) IP address is removed and physical ports connected to the switches are freed up	Global-IT-INF-NetworkData.
16	Firewall cleanup	This activity is performed to ensure that the CI's IP address are removed from the Firewall Policies (If Applicable)	Global-IT-INF-SecurityOps
17	Retirement completion task	In case of a virtual server, this activity will ensure that the server is removed from the vCenter console.	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements
		In case of a physical server, this activity will ensure that the server is scrubbed and unracked from the Rack.	Global-IT-INF-UnixServerRetirements / Global-IT-INF-ServerRetirements

Closure Requirements of server disposal CTASKS:

Table 4 Closure Requirements & Description

Closure Requirements	Description
Pre-Implementation Screenshot	This evidence will provide confirmation that the server CI is active on the network. This will include screenshots of Ping status and nslookup
Post-Implementation Screenshot	This evidence will provide confirmation that the server CI is deactivated on the network. This will include screenshots of Ping status and nslookup
Summary of System Retirement Tasks	Post Retirement please populate the below information in Work Results. Deviations should be discussed along with their resolutions. A technical description of the final state of the Computerized System, e.g., listing of items disposed or decommissioned, listing of final status and locations of archived data, and listing of final user access rules. Index of documents related to the retired system and storage will be included in the summary report.
Operational Support and Maintenance	Identification of the continuance, change or discontinuance of system operational support and maintenance. Identify output in Work Results.
Verification and Testing	Identify if verification and testing of any process used to retire the Computerized System is required. For example, if the data archiving solution requires retrieval testing, or if data migration to a different Computerized System requires testing. Document output in Work Results with evidences and CR details.
Disposal of Assets	Identification of planned physical asset (hardware) disposal, including disposal method and controls to prevent data removal from disposed assets. Identify output in Work Results.

5.0 SYSTEM RETIREMENT REPORT

At the completion of all the disposal activities, a brief report summarizing all activities will be recorded in the “Closure Notes” of the change request. This report will summarize any deviations from this plan and any outstanding corrective actions.
