1.0 INTRODUCTION

1.1 Purpose

This document defines the systematic approach for the disposal of Empower 2 Servers and Databases hereby known as System.

1.2 Scope

The scope of this document covers the disposal of all in-scope production and non production Empower 2 Servers and Databases identified in section 12.0 Appendix of this document utilizing Normal/Single Environment workflow Change Requests in SNOW (ServiceNow).

1.3 Assumptions

Data has been archived via CHG0125738 and application was upgraded.

1.4 Limitiations

N/A

1.5 Exclusions

N/A

2.0 DEFINITIONS & ACRONYMS

The definitions and acronyms defined in the ITQMS Glossary Standard (SOP-000477729) are the standard definitions to be used.

Table 1 Definitions & Acronyms

Abbreviations, Acronyms and Terms	Definition
DAF	Dispoable Authorization Form
EOL	End of Life
ITSM Tool (Service-Now)	IT Service Management
OS	Operating System

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

3.0 ROLES & RESPONSIBILITIES

Table 2 Roles & Responsibilities

Role	Description
System Owner	Member of IT organization responsible for signing off on the DAF and/or Memo document
Business Owner	Member of the Business organization responsible for signing off on the Memo document
Change Requester	Member of IT or the Business organization responsible for requesting the change.
Change Owner	Responsible for requesting and planning the change, completing the appropriate documentation, recommending the release schedule, and managing the change into production.
Level 2 Support Group (Infrastructure)	Responsible for doing the required work to support and implement the change in all necessary environments.
Technical Approver	Responsible for reviewing and approving the changes for accuracy and completeness.
CSV Approver (CSV)	Reviews and approves all changes to ensure that documentation is complete and provided in change. Provides final review of the change as implemented and tested for non-GxP systems.
Global Quality Assurance (QA)	Reviews and approves all changes with GxP sensitivity to ensure documentation is complete and change is implemented and tested as documented.

4.0 WITHDRAWAL PLAN

4.1 Hardware/Software Strategy

The Hardware/Software will be removed while disposing entire System.

4.2 User Access

User access will be deactivated and interface will be disabled via CTASK.

4.3 Migrating and Formatting Data

Application data has been archived via CHG0125738 for future reference and the application is upgraded. The existing application will be removed by formatting/scrubbing the physical server disks via CTASK.

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

4.4 Record Retention

N/A

4.5 Storage

Storage LUNs are unmapped from the inscope server CIs.

5.0 DECOMMISSIONING PLAN

5.1 Interfaces

No interconnected devices/interfaces found on these inscope servers.

5.2 Removing from Active Directory and / or SCCM *(if applicable)*

All in scope servers will be removed from Active directory and System center configuration manager via CTASK

5.3 Removing from Backup Tasks and / or other Management Tools

Scheduled backup task activities will be stopped via CTASK.

5.4 Ancillary Systems

There are no ancillary systems found on these inscope servers.

5.5 Removing the Application and/or data

Operating system will be removed via CTASK.

5.6 Vendor Maintenance

Vendor Maintenance contracts has been terminated. (EOL Hardware and OS)

5.7 Third Party Solutions

There is no third party solutions for inscope CIs.

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

5.8 System Shutdown

System shutdown is not applicable as these will be directly disposed.

5.9 Documentation

Related documents are to be retired with the help of CI librarianes. This will be part of Closure Requirements in the disposal activity.

6.0 DISPOSAL PLAN

A single environment work flow change shall be initiated in the ServiceNow for this Disposal Plan. All associated individual Storage CIs disposal shall be refrenced to change control and short-description of the change begins with the following key words : '**Empower 2 Storage Disposal'**. Respective CTASK for the Storage disposal will be created.

A single environment work flow change shall be initiated in the ServiceNow for this Disposal Plan. All associated individual Database CIs disposal shall be refrenced to change control and short-description of the change begins with the following key words: '**Empower 2 Database Disposal'**. Respective CTASK for the Database disposal will be created.

A single environment work flow changes shall be initiated in the ServiceNow for this Disposal Plan. All associated individual Server CIs disposal shall be refrenced to change control and short-description of the change begins with the following key words: '**Empower 2 Server Disposal'**. Respective CTASK for the Servers disposal will be created.

As per the approach for the CIs mentioned in section 12.0 **APPENDIX**, the following pre-requisites are required to initiate the disposal changes:

- All associated Change Requests, Incidents, Problems, Service Requests on the in-scope CIs must be in 'Closed' status to initiate a disposal change request.

- Memo: An approved Memo signed by the Business Owner confirming either of the following must always be present:

  - The relevant data residing on the in-scope CI for disposal is not needed and can be deleted.

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

- The relevant data residing on the in-scope CI for disposal has been migrated onto another system along with the **closed Data Migration change number** in the organization's ITSM tool.

- DAF: If the server CI to be disposed resides in PROD environment, and Data Migration change is not available. Since the business owners have agreed to dispose the CI along with any business data residing on it. This DAF suffices for that.

6.1 Hardware Disposal

As a part of the Change Request that is raised for the disposal of the in-scope CIs, the following technical tasks shall be completed.

Server disposal change :

S.No	CTASKs	Description
1	Backup Task	This will entail taking a monthly full backup of the server CI(s).
2	Database verification task	This task will ensure that no Databases are active for the server CI(s) being disposed.
3	DB Uninstallation Task	This activity will ensure that the Database(s) have been removed from Server CI(s)
4	OS configuration detail check	This will involve capturing the configuration details of the server.
5	SEP removal task	This activity will ensure that the server CI(s) have been removed from the SEP (Symantec Endpoint Protection) Console
6	Monitoring removal task	This activity will ensure that the servers CI(s) are removed from all monitoring tool consoles.
7	Backup Policy removal task	This activity will ensure that all backup policies applied onto the server CI(s) are being removed prior to disposal.
8	Remove the server from NAS share export list	This activity will ensure that server CI(s) are removed from the NAS export list (If Applicable)
9	Storage Reclamation & Reclaim the physical port	This activity will ensure reclaiming of storage space provisioned to the server and reclaiming of SAN FC ports (If Applicable)
10	Retirement initiation task	This activity will ensure that the server CI's IP is configured to "Dynamic"; server CI is removed

VIATRIS	Global
	Master Validation
System_Retiement_Plan - Empower 2 Servers and Databases MVD-003641552	
Approved	1.0, CURRENT

S.No	CTASKs	Description
		from the Viatris domain; uninstallation of monitoring and AV agents is performed, and server is powered off.
11	IP reclamation	This activity is performed to ensure that the CI's IP is reclaimed of disposed server.
12	Remove from DNS & Delete Server AD Object	This activity is performed to ensure that the server CI is removed from the DNS and that the server object is deleted from the AD console as well.
13	Firewall cleanup	This activity is performed to ensure that the CI's IP address are removed from the Firewall Policies (If Applicable)
14	Retirement completion task	In case of a virtual server, this activity will ensure that the server is removed from the vCenter console. In case of a physical server, this activity will ensure that the server is scrubbed.

Server Disposal Closure Requirements :

S.No.	Closure Requirements	Description
1	Before Activity Evidences	These evidences will provide confirmation that the Application and server CI is active on the network. This will include screenshots of server drive and server IP details.
2	After Activity evidences	These evidences will provide confirmation that the server CI is deactivated on the network. This will include screenshots of Ping status and nslookup.
5	DAF (as applicable) and MEMO	Attaching both the DAF document (if applicable) and the Signed-off Memo document.
4	Operational Support and Maintenance	This requirement will ensure that details are provided of continuance, change or discontinuance of system operational support and maintenance for the servers, wherever applicable.
5	Summary of System Retirement	This requirement will include a brief textual description of overall retirement activity performed on the server CI. This will also have a statement on the reclamation of any

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

		licenses active on the in-scope server CI. Additionally, CI Librarians will provide a statement on the documents which also had to be retired following the server CI disposal, if any.

Storage disposal change :

S.No	CTASK	Description
1	Remove from DNS & Delete Server AD Object	This activity is performed to ensure that the storage CI is removed from the DNS and that the server object is deleted from the AD console as well.
2	Monitoring removal task	This activity will ensure that the storage CI(s) are removed from all monitoring tool consoles
3	IP reclamation	This activity is performed to ensure that the CI's IP is reclaimed of disposed server.
4	Ping and nslookup output	This activity is performed to ensure that storage CI is removed from network.

Storage Disposal Closure Requirements :

SN	Closure requirement	Description
1	Before Activity Evidences	This activity will ensure that the storage CI(s) are active in the network, and it will include screenshot of: • Device rechability (Ping response) status • Device DNS entry (nslookup response) status
2	After Activity Evidences	This activity will ensure that the storage CI(s) are removed from the network, and it will include screenshot of: • Device rechability (Ping response) status • Device DNS entry (nslookup response) status
3	DAF (as applicable) and MEMO	Attaching both the DAF document (if applicable) and the Signed-off Memo document.
4	Operational Support and Maintenance	This requirement will ensure that details are provided of continuance, change or discontinuance of system

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023

SN	Closure requirement	Description
		operational support and maintenance for the servers, wherever applicable.
5	Summary of System Retirement	This requirement will include a brief textual description of overall retirement activity performed on the server CI. This will also have a statement on the reclamation of any licenses active on the in-scope server CI. Additionally, CI Librarians will provide a statement on the documents which also had to be retired following the server CI disposal, if any.

Database Disposal CTASKs :

S.No	CTASKs	Description
1	Database Backup policy Removal and Monitoring Maintenance task (only for SQL Instances)	This activity will ensure that all backup policies applied onto the DB CI(s) are being removed, also DB CI(s) are added under maintenance mode to avoid event alerts (actioned by monitoring team) prior to disposal.
2	Backup Task	This will entail taking a monthly full backup of the server CI(s).
3	Monitoring removal task	This activity will ensure that the servers CI(s) are removed from all monitoring tool consoles.
4	Backup Policy removal task	This activity will ensure that all backup policies applied onto the server CI(s) are being removed prior to disposal.

Database Disposal Closure Requirements :

S.No.	Closure Requirements	Description
1	Before Activity evidences	These evidences will provide confirmation that the Database CI is active on the network. This will include screenshots of • Database service running status • Database instance status
2	After Activity evidences	These evidences will provide confirmation that the database CI is uninstalled on the network. This will include screenshots of • Database service status • Database software status Database instance status

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

3	DAF (as applicable) and MEMO	Attaching both the DAF document (if applicable) and the Signed-off Memo document.
4	Operational Support and Maintenance	This requirement will ensure that details are provided of continuance, change or discontinuance of system operational support and maintenance for the servers, wherever applicable.
5	Summary of System Retirement	This requirement will include a brief textual description of overall retirement activity performed on the Databse CI. This will also have a statement on the reclamation of any licenses active on the in-scope server CI. Additionally, CI Librarians will provide a statement on the documents which also had to be retired following the server CI disposal, if any.

6.2 Software

In accordance to the license agreement with the software vendor, the end of life licenses will be discontinued.

6.3 System Support

N/A

6.4 Third Party Providers

An RITM shall be created to Facility managers/ Local site IT teams who shall be repsonsible for ensuring destruction of physical servers where applicable.

7.0 SYSTEM RETIREMENT REPORT

At the completion of the Disposal activities, a report summarizing all activities will be created and validated as per the system retirement plan (Dublin-Manufacturing-Damastown Disposal). This report will summarize any deviations from the Retirement Plan and any outstanding corrective actions.

Effective Date (EST) : 20-Dec-2023
Print Date (EST) : 20-Dec-2023
Printed by : Sunil Anumarlapudi

Additionally, the report shall contain a table of all changes raised for disposal of the inscope CIs with them as referenced in section 6.0.

8.0 DELIVERABLES

The table below identifies the validation deliverables required for the systems in the Appendix.

Table 3 List of Deliverables

Title	Remarks
System Retirement Plan	This document is the retirement plan document to be referenced in the Server Disposal change.
System Retirement Report	The report shall provide as a part of the closure requirement for the activities mentioned in this plan as a part of the Server Disposal change.

10.0 ADDENDUMS, SUPPLEMENTS, REVISIONS

Addendums, supplements, and revisions to this document are permitted. A description of the change must be entered into the Revision History at the end of this document.

During the course of this endeavor, if it becomes necessary to amend, supplement, or revise this document, these changes will be prepared in the format of this document, and will be reviewed and approved by those individuals specified in the last revision of the original plan or an appointed designee.
